The General Practitioner Assessment Questionnaire (GPAQ) has been developed at the National Primary Care Research and Development Centre (NPCDRC) in Manchester. It is now widely used in UK general practice and forms part of the QOF for the nGMS contract.

GPAQ is a patient completed questionnaire to find out what patients think about care from both their general practice and their general practitioner. It focuses on aspects of general practice that are not covered elsewhere in the Quality and Outcomes Framework (QOF). These include access to GP services, inter-personal relationships and continuity of care.

There are two forms of GPAQ; the post-consultation version, which is completed by patients following their consultation. The postal version is administered directly to patients in their own homes. Both ask people about their general experiences of their GP or practice.

Calculation of results for each question

For questions where patients are asked to rate your services, their responses are transformed to a scale of 0 to 100 percent of one mark. Excellent represents the best possible response and is worth 100%; Very Poor represents the worst response 0%.

For other questions, the value for the indicator is normally a percentage. Where it is possible to compare these scores to national averages, we have done so. The National Averages are calculated by the NPCRDC and are published on the GPAQ website. (www.gpaq.info)

Your score is calculated by multiplying appropriate scale rating (0 to 100) by the number of patients who awarded you that point on the scale. This figure is shown in brackets after each category. This is done for every point on the scale.

Your total score is calculated and divided only by the number of respondents to that question. In this way your score is not affected by non-responders.
